                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  receptors leading to intracellular signaling. There are currently four known tyrosine kinase receptors for fibroblast growth factors. These receptors can each bind several different members of this family. Members of this family have a beta trefoil structure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   65 GCGCCACAAGCAGCAGCTGAGCCATGAGGGGAAAATCACCACCTTCACAGCCC 124

```
The present invention provides the protein and coding sequences of human fibroblast growth factor-1 (FGF-1) and a mutant that is resistant to thrombin degradation. The thrombin degradation resistant FGF-1 protein can be used for treating a disease or disorder (e.g. myocardial ischaemia, peripheral vascular disease, cerebral ischaemia, epithelial injury, epidermal wound injury, nerve injury, or bone damage), for
                                                                                                                                                                                            Thrombin resistant FGF-1, FGF-1, fibroblast growth factor-1, myocardial ischaemia; peripheral vascular disease; cerebral ischaemia; peripheral vandular disease; cerebral ischaemia; epithelial injury; epidarmal wound injury; nerve injury; mutant; bone damage; vasotropic, cardiant; cerebroprotective; vulnerary; neuroprotective; osteopathic; gene; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New thrombin degradation resistant fibroblast growth factor-1 (FGF-1) polypeptide, useful for treating a disease or disorder, e.g. cerebral ischemia or bone damage, or for enhancing the effectiveness of an FGF-1 response in a mammal.
                                                                                                                                                                Thrombin resistant FGF-1 mutant coding sequence.

ECGF is useful for, among other purposes, diagnostic applications and has potential in the treatment of damaged blood vessels or other endothelial cell-lined structures. Human ECGF (AAT37503) or fragments may be obtained using oligonucleotides (AAT37504 and AAT37509 to AAT37509) whose design is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  based on the sequence of bovine alpha- and beta-ECGF.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            To screen the human brain stem cDNA library for clones contg. ECGF inserts, a specific oligonucleotide was designed. This oligonucleotide was based upon a partial AA sequence analysis of the amino terminus of ECGF (see AAP70460 and AAP70461). Fig 3c sets forth for comparison the AA sequence of cyanogen bromide-cleaved bovine alpha and beta ECGF (AAP70834). The two clones that were isolated, ECGF clones 1 and 29, were analysed in further detail. The nucleotide sequence of these clones and the AA sequence deduced from the nucleot acid sequence is shown in Fig 8 (see AAN70788 and AAP70482). (Updated on 25-MAR-2003 to correct pa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 CCTTCACAGCCCTGACCGAGAAGTTTAATCTGCCTCCAGGGAATTACAAGAAGCCCAAAC 120

```

This sequence represents the complete cDNA sequence encoding both human alpha— and beta-endothelial cell growth factors (ECGP, AAW75413-W75414). The sequence was isolated from a human brain stem cell cDNA library using a probe designed based on fragments of the bovine ECGF (see AAW75416.W75418). The ECGF protein can be used in compositions for promoting wound healing. ECGF is also used to grow cells on a prosthetic device

Compositions for promoting wound healing - containing endothelial cell growth factor polypeptides.

Example; Fig 8; 23pp; English.

```

The invention relates to DNA encoding human endothelial cell growth factors (ECGF) and plasmids comprising the DNA sequences. The DNA encodes a cleavable signal peptide and an ECGF, where removal of the signal peptide yields a mature form of the ECGF, where the ECGF is alpha-ECGF or beta-ECGF. The DNA is used to produce recombinant ECGF proteins, which ò CCTTCACAGCCCTGACCGAGAAGTTTAATCTGCCTCCAGGGAATTACAAGAAGCCCAAAC 120 can be used in treatments to repair or regenerate blood vessels or other structures lined with endothelial cells. The present sequence represents a human ECGF cDNA sequence (determined from lambda ECGF clones 1 and 29) 61 CCTTCACAGCCCTGACCGAGAAGTTTAATCTGCCTCCAGGGAATTACAAGAAGCCCAAAC 120 TCCTCTACTGTAGGAGGAGGGAGCCACTTCCTGAGGATCCTTCCGGATGGCACAGTGGATG 180 DNA encoding a cleavable signal peptide and an endothelial cell growth factor - useful for producing recombinant endothelial cell growth factor 1 GAAITICGGGAACGCGCCACAAGCAGCAGCTGCTGAGCCATGGCTGAAGGGAAATCACCA 60 240 240 241 AGGTGTATATAAAGAGTACCGAGACTGGCCAGTACTTGGCCATGGACACCGACGGGCTTT 300 GAATTCGGGAACGCGCCACAAGCAGCAGCTGCTGAGCCATGAGGGGAAAATCACCA 60 181 GGACAAGGGACAGGAGCGACCAGCACATTCAGCTGCAGCTCAGTGCGGAAAGCGTGGGGG 0; Gaps /*tag* c /note= "acidic FGF begins at this position" "alpha-ECGF begins at this position" /*tag= b

A cDNA clone (AA745985) codes for human endothelial cell growth factor (AAW66818). To obtain the clone, a human brain stem cDNA library was screened with a probe (see also AA745986) hased on N-terminal sequences of bovine ECGF (see also AA745986). ECGF clones 1 and 29 were flanking regions sequenced by the chain termination method. DNA sequences (see also AA74598-84) derived from the complete cDNA can be used in the large-scale prodn. of recombinant ECGF beta (AAM66816) and alpha (AAW66817) in transformed host cells.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to an isolated composition comprising a ternary complex of an Fibroblast Growth Factor (FGF) ligand polypeptide (ABR5G1G3, ABR5G1G5), an FGF receptor polypeptide (ABR5G1G4) and a heparin agonist or antagonist, where the agonist or antagonist binds to the FGF ligand polypeptide and the FGF receptor polypeptide to form the ternary complex. The composition is useful for identifying a compound that is an inhibitor of FGF receptor activity. FGF1 is also known as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       13 GCGCCACAAGCAGCAGCTGCTGAGCCATGGCTGAAGGGGAAATCACCACCTTCACAGCCC

Combination for diagnosing, staging, treating, or monitoring the progression of treatment of a vascular disease, e.g. atherosclerosis, comprises several CDNAs that are differentially expressed in activated vascular tissue.

Claim 1; Page; 18pp; English.

This invention relates to a combination comprising several cDNAs that are differentially expressed in activated vascular tissue. The invention also discloses a high throughput method for detecting differentially expressed concloses a high throughput method for detecting may have antiarteriosclerotic, cytostatic, cardiant, hypotensive, antidiabetic, gynaecological, vasotopic and exerbroprotective activities and may be used in gene therapy. The CDNAs of the invention may be used in a high-throughput methods for detecting differential expression of one or more compute methods for detecting differential expression of one or more throughput methods for detecting differential expression of the invention. A protein encoded by the cDNA may be used to screen several conceutes or compounds to identify a ligand that specifically binds to the protein or to produce or purify an antibody to the protein that can be used to detect a protein in a sample or purify a natural or the protein from a sample. The nucleotides may be useful for diagnoshing, staging, treating, or monitoring the progression of treatment of a vascular disease, e.g. altersoclerosis, can also be used for large-scale injury, restension, diabetes, pre-eclampsia, ischaemia-reperfusion analytic of an allery expression and also an also be used for large-scale analytic or annealytic or an also be used for large-scale. genetic or gene expression analysis of several new nucleic acid molecules. Antibodies to the proteins encoded by the CDNAs are useful for diagnosing pre-pathologic disorders, and chronic or acute diseases associated with abnormalities in the expression, amount or distribution of the protein. The present sequence represents a CDNA of the invention that is differentially expressed in activated vascular tissue. Note: The sequence data for this patent did not form part of the specification, but

Inhibiting expression of target gene, useful e.g. for inhibiting oncogenes, by administering double-stranded RNA complementary to the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         B
```

The invention relates to inhibiting expression of a target gene (I) in a cell by introducing an inhibitory RNA (dsRNA1) having a double-stranded structure of at most 49 consecutive bases. At least part of one strand (asl) of dsRNA1 is complementary to (I) and at least one end of dsRNA1 has an overthang of 1-4 nucleotides. The method is used to inhibit the expression of a wide range of genes, e.g. oncogenes, cytokine genes etc. in humans, also genes in Plasmodium or in viruses or viroids that are pathogenic for humans, animals or plants. Introducing an overhang into dsRNA1 greatly increases effectiveness for inhibiting gene expression, both in vivo and in vitro and also increases stability and thus the effective concentration inside the cell. The present sequence is that of a gene related to the invention

Sequence 468 BP; 131 A; 115 C; 126 G; 96 T; 0 U; 0 Other;

```
Inhibiting expression of target genes, useful e.g. for treating tumors, by introducing into cells two double-stranded RNAs that are complementary
                                                                                                    to the target.
```

Claim 13; Page 44; 100pp; German.

method uses antisense inhibition of gene expression using double stranded RNA inhibition (RNA1). The method is particularly used to treat tumours or infections, especially by Plasmoddum or vitroses/vitroids (pathogenic on humans, animals or plants). The method provides more effective inhibition of expression than known methods using a single dsRNA, even at very low concentrations. When dsRNA has at least one unpaired nucleotide at the end, stability (and thus effective concentration in the cell) is improved and efficiency can be increased further by pretreating the cells with The invention relates to inhibiting expression of a target gene in a cell by introducing at least two oligoribonucleotides (GSRNAI and II), both with a double-stranded (GS) structure of at most 49 sequential mucleotide pairs. At least part of one strand (S1, S2) of the ds structures in each of dsRNAI and II are complementary to regions in the target gene. The interferon. The present sequence is that of a target DNA of the invention

Treating the cells with interferon greatly increases the extent to which dsRNA can inhibit expression of the target genes, and the effect is even greater when dsRNA are modified to increase their stability. ABX09936-ABX10075 represent gene fragments used to illustrate the method of the invention 99 GGGAATTACAAGAAGCCCAAAACTCCTCTACTGTAGCAACGGGGGCCACTTCCTGAGGATC 158 61 GGGAATTACAAGAAGCCCAAACTCCTCTACTGTAGCAACGGGGGCCACTTCCTGAGGATC 120 121 CTTCCGGATGGCACAGTGGGATGGGACAGGGGCACCAGCACCAGCACTGGCAG 180 219 CTCAGTGCGGAAAGCGTGGGGAGGTGTATATAAAGAGTACCGAGACTGGCCAGTACTTG 278 CITCCGGATGGCACAGGGACAAGGGACAGGAGGAGCAACAGCACATTCAGCTGCAG 218 301 CTGGAAAGGCTGGAGGAGAACCATTACAACACCTATATATCCAAGAAGAAGCATGCAGAAAG 360 double-stranded oligoribonucleotide, after 339 CTGGAAAGGCTGGAGGAGAACCATTACAACACCTATATATCCAAGAAGCATGCAGAGAAG 398 39 AIGGCIGAAGGGGAAAICACCACCTICACAGCCCTGACCGAGAAGTITAAICTGCCTCCA 98 1 ATGGCTGAAGGGGAAATCACCACCTTCACAGCCTGACCGAGAAGTTTAATCTGCCTCCA 60 least a segment of one strand of the ds structure is complementary with the target gene and the cells are treated with interferon before introduction of dsRNAI. The method is used to inhibit expression of target genes, particularly oncogenes, cytokine genes, Id (not defined) protein genes; developmental or prion genes, or genes expressed in invention describes a novel method for inhibiting expression of a structure of not more than 49 consecutive nucleotides (nt), where at 0; Gaps Inhibiting expression of target genes, e.g. oncogenes, in cells, by Human acidic fibroblast growth factor; phage T7 polymerase promoter; lysis; phage dependent superproduction; FGF fr HUMECGFB; gene; ds. 399 AAITGGTTTGTTGGCCTCAAGAAGAATGGGAGCTGCAAACGCGGTCCT 446 361 AATTGGTTTGTTGGCCTCAAGAAGAATGGCAGCTGCAAACGCGGGTCT 408 63.9%; Score 408; DB 6; Length 468; Human acidic fibroblast growth factor DNA - FGF fr HUMECGFB. 0; Indels Sequence 468 BP; 131 A; 115 C; 126 G; 96 T; 0 U; 0 Other; Pred. ```
Bacteriophage-dependent method for producing biologically active proteins or peptides, involves employing an Escherichia coli transformed with a plasmid containing the targeted gene(s) operably linked to a promoter.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                biologically active protein comprising infecting a strain of Escherichia coli, which has been transformed with a plasmid having at least one copy of an expressible gene, such as a human acidic fibroblast growth factor. The expressible gene encodes a biologically active protein operably linked to a plage T7 polymerase promoter, with a bacteriophage capable of mediating delayed lysis. The method is useful for the phage dependent superproduction of biologically active protein and peptides. The method is particularly useful for enhancing the production of heterologous proteins in bacterial host cells. This polymorleotide sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   99 GGGAATTACAAGAAGCCCAAACTCCTCTACTGTAGCAACGGGGGCCACTTCCTGAGGATC 158

Key

The invention relates to a method for inhibiting expression of a target gene (Rb19168-ABL91797) in a cell by introducing at least one oligoribonucleotide that has a double-stranded structure consisting of at most 49 sequential nucleotide pairs, with at least part of one strand complementary with the target gene and has at least one end a single stranded segment of 1-4 nt. The method provides oligoribonucleotides for antisense inhibition of gene expression useful e.g. for treating tumours but the oligoribonucleotides may also be directed against genes present The method provides more effective inhibition of gene expression than use of known oligonucleotides, probably because the uppaired overhang increases stability and thus intracellular concentration Human, HIV; HCV; gene expression, oligoribonucleoride; tumour; pathogen; Plasmodium; virus; viroid; cytokine; prion, antisense oligonucleotide; cytostatic; virucide; protozoacide; antibacterial; ds. in pathogens (e.g. Plasmodium or viruses/viroids, pathogenic on humans, animals or plants) or against cytokine, Id, developmental or prion genes. Inhibiting gene expression in cells, useful for e.g. treating tumors, by introducing double-stranded complementary oligoRNA having unpaired Hadwiger P; Human polynucleotide SEQ ID NO 63. Once Togan: pancress; Vector: pOTB7; Site 1: XhoI; Site 2: ECORI; CDNA made by oligo-dT priming.

Site 2: ECORI; CDNA made by oligo-dT priming.

Directionally cloned into ECORI/XhoI sites using the following 5: adaptor: GGCACCAG(G). Size-selected >500pp for average insert size 1.8kb. Library constructed by Ling Hong in the laboratory of Gerald M. Rubin (University of California, Berkeley) using ZAP-CDNA synthesis kit (Stratagene) and Supersoribt II RT (Life Technologies).

Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dr primer containing a Nor I site. Double stranded cDNA was ligated to an ECOR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dr)18 tail. The sequence tag for this library is CCGTCAGTC. The coll lines was provided by Dr

double-stranded cDNA was size selected, ligated to ECC RI adapters (Pharmacia), digested with Not I and cloned into the Not I and ECC RI sites of a modified ppTT3 vector (Pharmacia). The retinas were obtained from a 55 year old Caucasian and total cellular poly(A) + RNA was extracted 6 hrs after their removal. The retina RNA was kindly provided by Roderick R. McInnes M.D. Ph.D. from the University of Toronto. Library constructed by Bento Soares and M.Fatima Bonaldo. " /clone_lib="Soares retina N2b4HR"

This amino acid sequence is identical to the alpha-ECOT but the best sequence constitution acids. The sequence was included from a hostin as no SCT. Obserminal amino acids. The sequence was included from a humb frain sequence and LOMA library using a proced designed based on transmiss of the bortine ECOT (see AMY7346-877343). The SUGRED process in can be used in compasition for processing would healing. ECOT is also used to grow colls on a prochabilite device our and any acid of the sequence of the compasition for processing would healing. ECOT is also used to grow colls on a prochabilite device our acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Endothelial cell growth factor; EGGF; cleavable; recombinant; repair; regenerate; blood veseel; endothelial cell; human.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             //note= "meguence of human fibroblast growth factor is homologous to the protein whose sequence starts at this position"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New monogenous preparations of cylotoxic conjugates and DNA -
contain fibroblast growth factors and cylotoxic agents for
treating TOP conditions such as tumours, disbettes and theumstoid
arthrits.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human, endothelial cell growth factor; EGGF, brain stem; probe; hybridisation; bovine; wound healing; prosthetic device.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Key Location/Qualifiers
